INSTRUCTIONS FOR USE

Be sure that you or your caregiver read, understand, and follow the Instructions for Use before injecting TAKHZYRO. A healthcare provider should show you how to prepare and inject TAKHZYRO properly before you or your caregiver use it for the first time. Contact your healthcare provider if you have any questions.

WELCOME TO YOUR STEP-BY-STEP GUIDE TO SELF-ADMINISTRATION WITH TAKHZYRO

TAKHZYRO is a prescription medicine used to prevent attacks of hereditary angioedema (HAE) in patients 12 years of age and older. TAKHZYRO is a subcutaneous (under the skin) injection that you can self-administer after being trained by a healthcare provider. Caregivers can also receive administration training.

Use the menu at the bottom of the page to move to the next section.

GETTING STARTED  You will need the following supplies:

- One vial of TAKHZYRO 300 mg
- One empty 3 mL syringe
- One 18G transfer needle (longer needle)
- One 27G ½-inch injection needle (shorter needle)
- Alcohol wipes
- Sharps disposal container

Please see Important Safety Information using the tab below, as well as full Prescribing Information, including information for patients.
BEFORE YOU GET STARTED

Important Information
- TAKHZYRO is a ready-to-use solution that does not require reconstitution for injection under the skin (subcutaneous). It is supplied in a single-dose glass vial.
- Your healthcare provider will prescribe the dosage you should take.
- Only use the syringes, transfer needles, and injection needles that your healthcare provider prescribes.
- Only use the syringes, transfer needles, and injection needles 1 time. Throw away (dispose of) any used syringes and needles in a sharps container.

Additional Information and How to Store TAKHZYRO
- You should always follow the specific instructions given by your healthcare provider and contact him or her if you have any questions.
- Remember to wash your hands with soap and water before handling any of the items needed for your injection, and always handle supplies carefully to avoid contamination.
- TAKHZYRO should be stored in the refrigerator at 36°F to 46°F (2°C to 8°C); do not freeze.
- Store TAKHZYRO in the original carton to protect the vial from light.
- Keep TAKHZYRO and all medicines out of the reach of children.

Click “Steps to inject” in the menu below to continue.
1 PREPARE FOR YOUR INJECTION

- Gather all supplies and place them on a clean, well-lighted, flat work surface. Take the vial out of the refrigerator **15 minutes** before use and allow it to reach room temperature before preparing your injection.

- Check the expiration date on the box and vial label. **Do not** use if expiration date has passed. Check the supplies for damage and **do not** use if they appear damaged.

- Make sure your work area is clean and your **hands are washed**.
  
  **Important:** Do not touch any surface or body part, especially your face, after washing your hands before injection.

- Remove the vial from the packaging. Do not use the vial if the plastic cap covering is missing. Gently turn the vial upside down (invert) 3 to 5 times to mix the medicine.
  
  **Important:** Do not shake the vial to avoid foaming.

- Look at the medicine in the vial for visible particles or a change in the color. **Do not use** if it contains visible particles or has changed color (medicine should be colorless to slightly yellow).

- Remove the plastic cap and place the vial on a flat surface. Clean the rubber stopper with an alcohol wipe and allow it to dry completely. **Do not** remove the rubber stopper.

---

**Please see Important Safety Information using the tab below, as well as full Prescribing Information**, including information for patients.
2 ATTACH TRANSFER NEEDLE TO SYRINGE

- Screw the 18G transfer needle to the 3 mL syringe, keeping the needle cap on.
- Pull back the plunger to fill the syringe with air equal to the amount of medicine in the vial.
- Hold the syringe by the barrel with one hand and the transfer needle cap with the other hand. Pull off the transfer needle cap straight away from the syringe and away from your body. Do not pull on the plunger or touch the needle tip.

Click here for Step 3 >
3 TRANSFER TAKHZYRO INTO SYRINGE AND SWITCH TO THE INJECTION NEEDLE

- Keep the vial on the flat surface and insert the transfer needle into the center of the rubber stopper
- Push the plunger down to inject air into the vial and hold the plunger down
- Slowly turn the vial upside down with the transfer needle and syringe attached and pull back on the plunger to withdraw the full dose from the vial

Important: Keep the tip of the needle in the medicine to avoid drawing air into the syringe as you pull the plunger back. This will help ensure that you are withdrawing the full dose.

- Remove large air bubbles by gently tapping the syringe barrel with your fingers until the bubbles rise to the top of the syringe. Slowly push the plunger to allow air to go back into the vial until the medicine reaches the top of the syringe. Repeat these steps until large air bubbles are removed

Important: Check again to make sure you have the right amount of medicine in the syringe. If you don't have enough, pull back on the plunger again while keeping the needle in the medicine to get your full dose.

3 TRANSFER TAKHZYRO INTO SYRINGE AND SWITCH TO THE INJECTION NEEDLE (cont'd)

- Return the vial to an upright position. Without removing the needle from the vial, unscrew the syringe by holding the needle hub and turning the syringe counterclockwise. Return the syringe to an upright position.

- Throw away the 18G transfer needle and the vial in a sharps disposal container.

- Screw the 27G ½-inch injection needle to the syringe.

**Important:**
- Do not remove the needle cap from the injection needle when attaching to the syringe.
- Do not use the transfer needle to inject TAKHZYRO as this may cause pain and bleeding.

Click here for Step 4 >
4 SELECT AND PREPARE INJECTION SITE

- TAKHZYRO can be self-administered in your stomach (abdomen) or thigh. If given by a caregiver, TAKHZYRO may also be injected in the upper arm.
- Clean the injection site with an alcohol wipe and let it dry completely.

**Important:**
- Use a different injection site each time you inject to keep your skin healthy.
- Choose a spot at least 2 inches away from any scar or your navel (belly button).
- Do not choose an area that is bruised, swollen, or painful.
- TAKHZYRO should be taken within 2 hours of preparing the dosing syringe at room temperature. A prepared dosing syringe can be refrigerated at 36°F to 46°F (2°C to 8°C) and must be used within 8 hours of preparation. Take the dosing syringe out of the refrigerator 15 minutes before use and allow it to reach room temperature prior to injecting.

Click here for Step 5
5 INJECT TAKHZYRO

- Hold the syringe by the barrel with one hand and the injection needle cap with the other hand.
- Pull off the injection needle cap straight away from the syringe and away from your body. **Do not** pull on the plunger or touch the needle tip or allow it to touch any other surface. Gently pinch about 1 inch of skin at the cleaned injection site and insert the needle.

**Important:** Be sure to inject under the skin in a way that is neither too shallow (skin layer) nor too deep (muscle).

- Slowly push the plunger to inject all the medicine until none of it remains in the syringe. Release the skin fold and gently remove the needle. **Do not** recap the needle.

Click here for Step 6 ➤
6 THROW AWAY NEEDLE AND SYRINGE

- Discard the injection needle and syringe in a sharps disposal container
- If you do not have an FDA-cleared sharps disposal container, refer to the Instructions for Use for guidelines on how to use a household container
- Follow your community guidelines on the right way to dispose of your sharps disposal container

**Important:** Always keep the sharps disposal container out of the reach of children.

Visit TAKHZYRO.com for a video demonstration of these steps on how to properly inject.
WHAT IS TAKHZYRO?
TAKHZYRO is a prescription medicine used to prevent attacks of hereditary angioedema (HAE) in people 12 years of age and older.

It is not known if TAKHZYRO is safe and effective in children under 12 years of age.

IMPORTANT SAFETY INFORMATION
TAKHZYRO may cause serious side effects, including allergic reactions.
Call your healthcare provider or get emergency help right away if you have any of the following symptoms:
• wheezing
• difficulty breathing
• chest tightness
• fast heartbeat
• faintness
• rash
• hives

The most common side effects seen with TAKHZYRO were injection site reactions (pain, redness, and bruising), upper respiratory infection, and headache.

These are not all the possible side effects of TAKHZYRO. For more information, ask your healthcare provider or pharmacist. You may report side effects to the FDA at 1-800-FDA-1088.

TAKHZYRO has not been studied in pregnant or breastfeeding women. Talk to your healthcare provider about the risk of taking TAKHZYRO if you are pregnant, plan to be pregnant, are breastfeeding, or plan to breastfeed.
